Contents to volume 90

Computational physics

- Quartapelle, L. and M. Verri
On the spectral solution of the three-dimensional Navier–Stokes equations in spherical and cylindrical regions 1
- Barone, L.M., R. Simonazzi and A. Tenenbaum
Molecular dynamics on APE100 44
- Brugè, F.
A mixed geometric-systolic approach to parallel molecular dynamics simulations 59
- Linke, A., D.W. Heermann and P. Altevogt
Simulating very large Ising systems for short timescales 66
- Silva Fernandes, F.M.S. and J.P. Prates Ramalho
Hypervolumes in microcanonical Monte Carlo 73
- Haerle, R., R. Haydock and R.L. Te
Estimating average densities of states for disordered systems 81
- Indjin, D., G. Todorović, V. Milanović and Z. Ikonić
On numerical solution of the Schrödinger equation: the shooting method revisited 87
- Seymour, M.H.
Matrix-element corrections to parton shower algorithms 95
- Rossi, M. and A.P. Flitney
Symbolic algebra and renormalization of gauge theories 189
- QCD_TARO Collaboration, Akemi, K., Ph. deForcrand, M. Fujisaki, T. Hashimoto, H.C. Hege, S. Hioki, O. Miyamura, A. Nakamura, M. Okuda, I.O. Stamatescu, Y. Tago and T. Takaishi
Quantum chromodynamics simulations on a non-dedicated highly parallel computer 201
- Lenz, S. and H. Mall
A Monte Carlo approach to zero energy quantum scattering 215
- Taubmann, G.
Improvement of the convergence of the linear variation method due to a variation of the basis 235
- Szmytkowski, R.
The relativistic multi-channel variable phase method for solving asymptotic equations in electron–atom and electron–ion scattering 244
- Iitaka, T., N. Carjan and D. Strottman
Stability of the symmetric multistep methods for the time-dependent Schrödinger equation 251

Larson, D.J., D.W. Hewett and A.B. Langdon	
Correction factors for PIC accumulation on radial grids	260
Kazeminezhad, F., S. Zalesak and D. Spicer	
A particle model on an unstructured mesh	267
Iqbal, M.	
On regularized numerical inversion of Mellin transform	293
Computer programs in physics	
Cheb-Terrab, E.S. and K. von Bülow	
A computational approach for the analytical solving of partial differential equations	102
Hennecke, M.	
A Fortran 90 interface to random number generation	117
Sa, B.-H. and A. Tai	
An event generator for the firecracker model and the rescattering in high energy pA and AA collisions LUCIAE version 2.0	121
Montagna, G., O. Nicrosini and F. Piccinini	
WWGENPV – A Monte Carlo event generator for four-fermion production in $e^+e^- \rightarrow W^+W^- \rightarrow 4f$	141
Salvat, F., J.M. Fernández-Varea and W. Williamson Jr.	
Accurate numerical solution of the radial Schrödinger and Dirac wave equations	151
Fuentes, N.O. and H.O. Gavarini	
ECMC, a portable two-dimensional code for plasma equilibrium computation on coaxial-multiple-coil systems	169
Cacciari, M., G. Montagna, O. Nicrosini and F. Piccinini	
SABSPV – A Monte Carlo integrator for small-angle Bhabha scattering	301
Abrashkevich, A.G., D.G. Abrashkevich and M. Shapiro	
HSTERM – A program to calculate potential curves and radial matrix elements for two-electron systems within the hyperspherical adiabatic approach	311
Ohl, T.	
Drawing Feynman diagrams with LaTeX and METAFONT	340
Basios, V., N.A. Chekanov, B.L. Markovski, V.A. Rostovtsev and S.I. Vinitsky	
GITA: A REDUCE program for the normalization of polynomial Hamiltonians	355
Gibbs, M.J. and B.R. Webber	
HERBVI – a program for simulation of baryon and lepton number violating processes	369
Kröger, S. and M. Kröger	
A program to compute the angular coefficients of the relativistic one-electron hyperfine structure parameters	381
